

Rivaldo Silalahi

Site Reliability Engineer / Kubernetes, Observability, Platform Engineering

Jakarta, Indonesia | rivaldosilalahi13@gmail.com | ***** | linkedin.com/in/rivaldo-silalahi | github.com/val

PROFESSIONAL SUMMARY

Site Reliability Engineer with 4+ years of experience operating Kubernetes, observability, GitOps, and cloud infrastructure across AWS and GCP. Currently focused on production monitoring platforms, 99.99% SLA/SLO workflows, infrastructure automation, and GPU/LLM infrastructure monitoring.

PROFESSIONAL EXPERIENCE

Lintasarta - Senior Site Reliability Engineer Jul 2025-Present

- Standardized centralized observability using Cortex, ELK, and OpenTelemetry, defining shared dashboards, alerting patterns, and 99.99% SLA/SLO views for multi-team operational use.
- Operated production k3s clusters for observability and shared platform services, improving reliability and day-2 operations for workloads aligned to 99.99% SLA/SLO targets.
- Built Go-based exporters for NVIDIA GB200 BMC telemetry, exposing GPU health, capacity, and hardware metrics into Cortex/Prometheus for proactive infrastructure monitoring.
- Implemented GitOps workflows with Flux and Argo CD for dashboards, alerts, and configuration changes, making operational updates version-controlled, auditable, and reproducible.
- Improved incident triage by linking alerts, dashboards, and runbooks into a consistent observability workflow for platform and application teams.
- Collaborated with infrastructure and application teams to onboard services into centralized monitoring, reducing fragmented dashboards and duplicated alerting logic.

GDP Labs - Site Reliability Engineer Nov 2022-Jun 2025

- Provisioned AWS and GCP infrastructure with Terraform, Ansible, and Packer, delivering reproducible environments for internal platforms and client workloads.
- Operated Kubernetes platforms using EKS and Kubespray, supporting containerized microservices and shared platform components with production-readiness practices for 99.99% SLA/SLO targets.
- Automated CI/CD workflows with Google Cloud Build and maintained deployment pipelines for application and infrastructure delivery.
- Managed monitoring and logging stacks with Prometheus, Grafana, and ELK, improving service visibility and incident troubleshooting workflows.
- Deployed GPU-based LLM inference workloads using vLLM and SGLang, validating throughput and latency behavior with k6 performance testing.
- Improved infrastructure maintainability by standardizing provisioning, deployment, and observability practices across cloud-native environments.

GDP Labs - Site Reliability Engineer Intern Jun 2022-Aug 2022

- Automated infrastructure provisioning with Terraform and Brainboard, and deployed VictoriaMetrics to support standardized monitoring environments.

Generasi Gigih - Backend Engineer Student Feb 2022-Jun 2022

- Completed backend engineering program using Ruby on Rails, TDD, and foundational system design.

Finku - DevOps Engineer Intern Oct 2021-Jan 2022

- Managed AWS cloud environments, built CircleCI pipelines, performed k6 API load testing, and created Grafana dashboards on Elasticsearch for backend service visibility.

EDUCATION

Bachelor of Information Systems, Binus University 2024-2026

Associate Degree in Computer Technology, Del Institute of Technology 2019-2022

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) - Linux Foundation - credly.com/badges/3e46e59e-33dc-4829-a42d-085a9e196dd8

SKILLS

Languages: Go, Python, Bash, SQL, Nix

Cloud & Platforms: AWS, GCP, Linux, NixOS, Kubernetes, EKS, k3s, Kubespray

Observability: Prometheus, Cortex, VictoriaMetrics, Grafana, ELK, Loki, OpenTelemetry, Alertmanager

Infrastructure & Delivery: Terraform, Ansible, Packer, Helm, Docker, Flux, Argo CD, Google Cloud Build, CircleCI, GitHub Actions

Performance & AI Infrastructure: k6, vLLM, SGLang, GPU monitoring
